Education

BSc, Honors Specialization in Computer Science — London, Ontario
University of Western Ontario — Expected Apr 2028

- **Honors/Awards:** Western Scholarship of Distinction ($3,500), 2023 Dean's Honor List

Skills

Technical Languages: Python, SQL, R, ARM, C/C++, JavaScript/TypeScript, HTML/CSS, SAS
Libraries/Frameworks: Pytorch, TensorFlow, scikit-learn, Jax, NumPy, pandas, Matplotlib
Tools: Jupyter Notebooks, Airflow, AWS, Git/GitHub, Unix/Linux, Flask, React, Next.js, GAUL/SSH, LaTeX
AI Tools/Skills: Claude Code (Skills, Hooks), MCP Servers, AI agent orchestration, RAG Pipelines, Copilot Studio

Experience

AI/Software Engineering Co-op | *Copilot Studio, Power Automate, NVIDIA Isaac Sim* — Guelph, Ontario
Linamar Robotics — Sep 2026 – Ongoing

- Built a Copilot Studio agent that turns purchasing Excel files into spend summaries with benchmarked optimal pricing, replacing a 4-hour manual process; validated against past summaries and test sets
- Developed a carbide drill cost-estimation agent that drives Linamar's in-house Excel calculators through Power Automate flows and Office Scripts, automating calculations the purchasing team previously did by hand
- Simulating humanoid and collaborative robot deployments in NVIDIA Isaac Sim within models of live production environments to evaluate the feasibility of integrating co-bots and humanoids before physical deployment

AI Engineer | *Python, Claude API, PostgreSQL, Next.js, LangGraph* — Boston, Massachusetts
PM Accelerator — Jun 2026 – Aug 2026

- Designed and built the multi-agent detection engine for PlanAIV, an Ai pre-construction risk platform that flags scope gaps, conflicts and ambiguities in construction bid documents before contractors commit to a price
- Orchestrated parallel trade-specialist agents in LangGraph with a merge state to consolidate findings, running 2.6x faster than a single sequential pass and processing complex 100+ page document sets end to end in 10-15 minutes
- Built the ingestion and retrieval layer (PyMuPDF extraction with a Claude vision fallback, pgvector semantic search over Postgres) and solely developed the full-stack Next.js/FastAPI platform serving the engine.

Machine Learning Intern | *Python, scikit-learn, TensorFlow, pandas, Jupyter Notebooks* — Chennai, Tamil Nadu
Solverminds Solutions — May 2024 – Dec 2024

- Built a **Deep Q-Network (DQN)** agent and custom simulation environment for container stowage planning, scaling to scenarios of 10,000 to 24,000 containers across 15 to 30 bays
- Encoded vessel lashing constraints as feasibility checks so the agent only produced valid plans
- Cut stowage-plan computation time 87% vs. the company's prior RL model over 1,000+ episodes

Projects

CodeBuster | *Python, Pytorch, GraphCodeBERT, scikit-learn* — Oct 2025 – Mar 2026

- Built a C++ code plagiarism detector that fuses token-level (TF-IDF), semantic (GraphCodeBERT embeddings), and behavioral signals, where both programs are executed in an isolated environment on shared test inputs and their outputs compared
- Owned the textual and semantic similarity modules and helped train an MLP that fuses all three signals into a plagiarism-risk score, reaching 83.5% recall, 76.2% precision, and 0.798 F1 on a held-out set of 3,159 pairs
- Co-authored a paper presented at CUCAI 2026 through a poster session and oral presentation to judges

Other

Languages: English (Native), Hindi (Conversational), Mandarin (Conversational)
Certifications: IBM Z Xplore – Concepts Badge, IBM – Artificial Intelligence Fundamentals,
